

ICAR-Consortia Research Platform (2014-17)
Biofortification in selected crops for nutritional security
Crop: Sorghum

Objectives

- To study the bioavailability of grain iron and zinc in the micronutrient enriched sorghum varieties
- To identify genotypes with high iron and zinc using conventional breeding, gene discovery and allele mining for candidate genes associated with high mineral (iron and zinc) and their functional genomics
- To develop food products with multi-grains/ready to cook suitable for mid-day meal
- Socio-impact studies to assess the quality parameters with respect to consumer acceptance and dissemination

Nutrient composition of sorghum grain compared to fine cereals (per 100 g)

Nutrient	Sorghum	Wheat (whole)	Rice (raw, milled)
Carbohydrate (g)	72.6	71.2	78.2
Protein (g)	10.4	11.8	6.8
Fat (g)	1.9	1.5	0.5
